

1.1. How Website Baker works

After you log in you will see the following screen. You will have to select an option by clicking an icon before you can do anything.

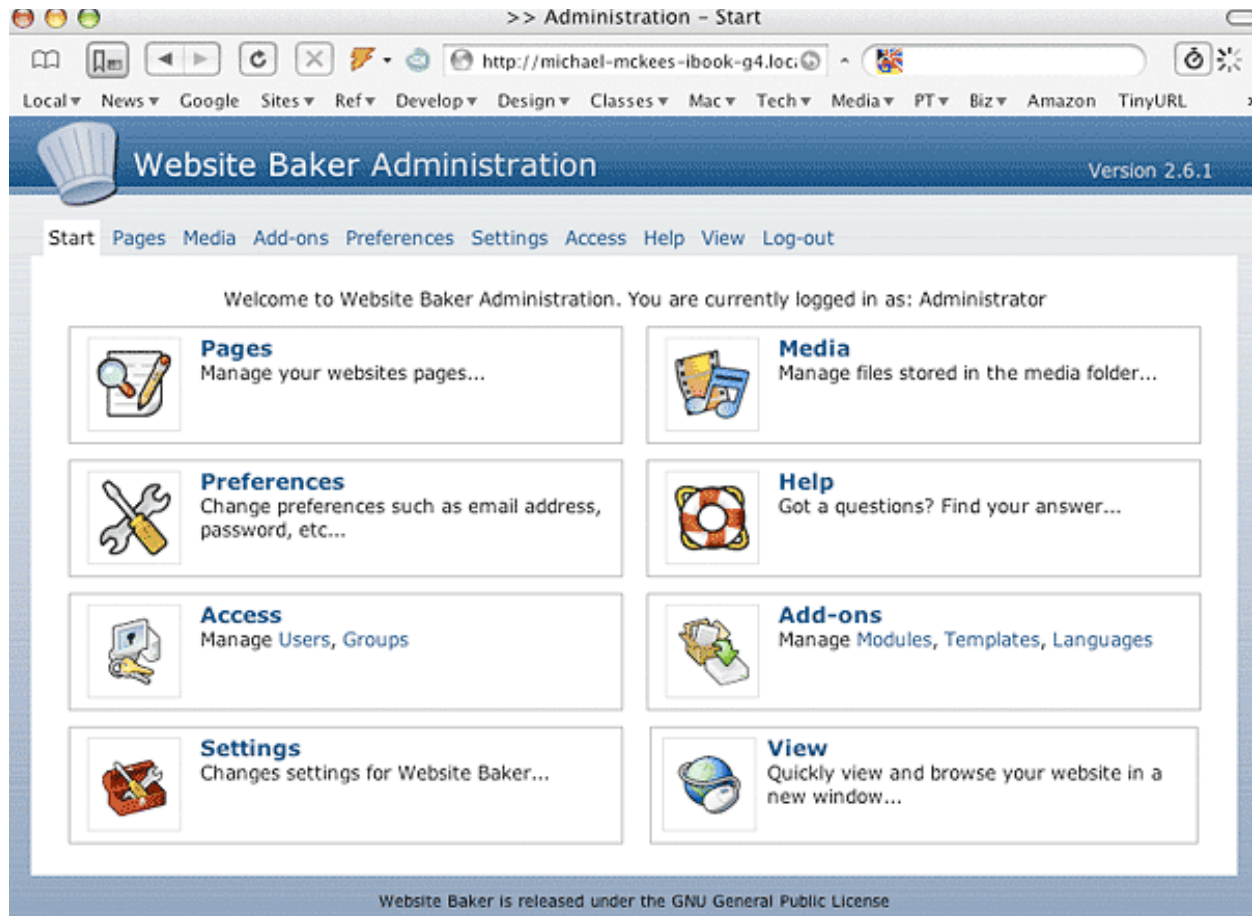

Fig. 2. - The Website Baker startup screen

Fig. 2 show the Website Baker startup screen. Notice that you have two ways to select functions. Across the top of the screen is a row of tabs. In the center you will see the same options represented as icons.

Next, we'll take a short overview of the system options.

Function	Description
Start	Your startup screen leads you to the power of Website Baker
Pages 	This is where you can manage and edit existing pages or create new ones
Media 	The media section gives you control of your images and files. With it you can upload images to place in your pages as well as browse the images already on the system.
Add-Ons 	Add-ons allow you to add or manage modules, add or change templates and manage Website Baker's language features.
Preferences 	Preferences give you the ability to personalize your Website Baker installation.
Options 	You can customize your system via the Options panel. A few clicks can fine tune it to your needs.
Access 	Add and manage users with the Access panel. Assign privileges to individuals and groups
Help 	Got a question? Find an answer. What could be simpler?
View 	Of course you want to see what your site looks like to the world. Click here.
Logout	Log out of the system.

 **Note:** The two navigation menus both offer access to the same control panels. The icons give you ease of use when you first enter the system. The tab menu gives you quick access to other control panels from any part of the administration section.
